WING MULTITRACK MANAGER 1.7 FOR macOS
D & L Recording Studio LLC · danatucker.com

Runs on Intel and Apple Silicon Macs with macOS 11 (Big Sur) or later.
No Python or other software needs to be installed.

INSTALL AND FIRST OPEN

1. Drag "WING Multitrack Manager.app" into your Applications folder.

2. Double-click it. The first time, macOS says it could not verify the app
   is free of malware. Click "Done" (not "Move to Trash").

3. Open System Settings > Privacy & Security. Scroll down to "Security",
   find the message about WING Multitrack Manager, and click "Open Anyway".
   Enter your Mac password if asked, then click "Open Anyway" once more.

From then on it opens normally with a double-click.

Why this happens: this build is not yet signed with an Apple Developer ID,
so macOS asks you to approve it once. Nothing is wrong with your download.

Alternative for Terminal users (does the same as step 3):

```
xattr -dr com.apple.quarantine "/Applications/WING Multitrack Manager.app"
```

USING IT

Help (Command-?) inside the app explains every step, from loading a .snap
snapshot and WING-LIVE WAVs to exporting mono WAVs, reports and a REAPER
project. Export to a new, empty folder. Your original recordings are never
changed.

Problems: use Help > Report a Bug... in the app.
